SUMMARY

Site reliability engineer with a background in network operations. Most of my recent work is Kubernetes capacity planning and incident review.

EXPERIENCE

Senior Software Engineer, Pennington, Blake and Miller (2024 - Present)

- Migrated twelve cron scripts into Airflow DAGs with alerting and retries.
- Taught a lunch-and-learn series on SQL window functions for analysts.
- Maintained streaming jobs in Spark that feed fraud and pricing models.
- Moved order events onto Kafka and added idempotent consumers.

Software Engineer, Cunningham-Stevens (2022 - 2024)

- Ran blameless postmortems for every Sev-2 incident and tracked follow-ups to closure.
- Shipped offline mode for the driver app so trips sync after dead zones.
- Wrote the on-call runbook that the team still uses; pages dropped by a third the following quarter.

SKILLS

Kubernetes, Prometheus, Grafana, Go, Linux

EDUCATION

B.S. Computer Science, Northfield College, 2018
