SUMMARY

Frontend developer who moved into full-stack work after leading a design-system rewrite. Comfortable owning a feature from schema to pixels.

EXPERIENCE

Senior Software Engineer, Castillo, Clark and Chambers (2024 - Present)

- Taught a lunch-and-learn series on SQL window functions for analysts.
- Cut p99 latency of the ledger API from 900 ms to 180 ms by moving reconciliation into a nightly job.
- Found and fixed a rounding bug in a staking contract before mainnet launch.
- Rewrote checkout in TypeScript; error reports fell after the first release.

Software Engineer, Robbins, Gardner and Williams (2022 - 2024)

- Migrated twelve cron scripts into Airflow DAGs with alerting and retries.
- Paired with designers weekly to keep the Figma library and the React components in sync.
- Shipped offline mode for the driver app so trips sync after dead zones.

SKILLS

TypeScript, React, Node.js, GraphQL, Storybook

EDUCATION

B.S. Computer Science, Westbrook State University, 2018
